

SQL Joins Exercises - Model Answers

INNER JOIN

```
SELECT Students.StudentID, Students.Name, Courses.CourseName FROM Students INNER JOIN Enrollments ON Students.StudentID = Enrollments.StudentID INNER JOIN Courses ON Enrollments.CourseID = Courses.CourseID;
```

LEFT JOIN

```
SELECT Students.StudentID, Students.Name, Courses.CourseName FROM Students LEFT JOIN Enrollments ON Students.StudentID = Enrollments.StudentID LEFT JOIN Courses ON Enrollments.CourseID = Courses.CourseID;
```

RIGHT JOIN

```
SELECT Courses.CourseName, Students.Name FROM Courses RIGHT JOIN Enrollments ON Courses.CourseID = Enrollments.CourseID RIGHT JOIN Students ON Enrollments.StudentID = Students.StudentID;
```

FULL OUTER JOIN

```
SELECT Students.StudentID, Students.Name, Courses.CourseName FROM Students FULL OUTER JOIN Enrollments ON Students.StudentID = Enrollments.StudentID FULL OUTER JOIN Courses ON Enrollments.CourseID = Courses.CourseID;
```

JOIN with Multiple Tables

```
SELECT Students.Name, Courses.CourseName, Enrollments.Grade, Instructors.Name FROM Students INNER JOIN Enrollments ON Students.StudentID = Enrollments.StudentID INNER JOIN Courses ON Enrollments.CourseID = Courses.CourseID INNER JOIN Instructors ON Courses.InstructorID = Instructors.InstructorID;
```

JOIN with Aggregate Function

```
SELECT Students.Name, AVG(Enrollments.Grade) AS AverageGrade FROM Students INNER JOIN Enrollments ON Students.StudentID = Enrollments.StudentID GROUP BY Students.StudentID;
```

JOIN with WHERE Condition

```
SELECT Students.Name, Courses.CourseName FROM Students INNER JOIN Enrollments ON  
Students.StudentID = Enrollments.StudentID INNER JOIN Courses ON Enrollments.CourseID  
= Courses.CourseID INNER JOIN Instructors ON Courses.InstructorID =  
Instructors.InstructorID WHERE Instructors.Name = 'Dr. Alice Johnson';
```
